Executive summary for management — live PHP/Node.js batch

Generated: 2026-11-03T21:40:14Z
Source: tenable_vm — https://cloud.tenable.com (live=True)
Scope: 9 CVEs discovered from PHP/Node.js plugin findings
Safety: read-only; no ticket, containment, patch, or restore executed.

Bottom line

9 CVEs were processed with 0 errors. All runs stopped at the ticket gate. 16 unique assets were returned; 0 of 25 asset plans had a verified target version.

Numbers at a glance

Metric	Value
CVEs run	9
Runs with errors	0
No-exposure runs	0
Runs awaiting ticket approval	9
Unique assets	16
Asset appearances	25
Asset max tiers critical / high / medium / low / unknown	16 / 0 / 0 / 0 / 0
KRI detected / clear / unknown / n/a	44 / 7 / 156 / 18
Plan paths patch / compensate / isolate	25 / 0 / 0
Asset plans with a verified target version	0
Containment candidates	25
Containment isolated / blocked / failed / restored	0 / 0 / 0 / 0
Patch jobs submitted / skipped	0 / 0
Verification remediated / still affected / unknown	0 / 0 / 0
Infection status counts	not_run=9
Approval gates recorded	0
Explicit unknown fields	293
Evidence manifests verified	9/9

Insights

Largest asset concentrations

Asset	CVEs	Max KRI	Tier
win11	7	85.5	critical
rhel9	3	85.6	critical
pa-820.lab.tenablesecurity.com	2	88.2	critical
freebsd14	1	86.1	critical
rhel10	1	85.6	critical
oraclelinux10	1	85.6	critical
ol9	1	85.6	critical
rhel8	1	85.6	critical

- **No target versions:** the batch produced 0 targets. Patch submission would skip every job until package/runtime versions are enriched.
- **Advisory without target:** CVE-2026-109618, CVE-2026-109619, CVE-2026-111497 had advisory metadata but no CPE-matched target version.
- **Control confidence:** KRI-02/03/04/06/07 are unknown on every asset; agent inventory is out of scope and no EDR/AV inventory was supplied.
- **Scope is broader than Node.js:** CVE-2026-111497 matched OS Brotli packages across 15 assets, not only the Node.js host.
- **Scanner mapping needs review:** the PHP CVEs also matched a PAN-OS plugin; verify the CVE/plugin association.
- **Discovery is capped:** the workbench query returned the requested 5,000-entry limit; paginate before calling the list exhaustive.

Decisions required

1. Fix runtime/package version enrichment before approving any patch gate.
2. Supply an asset inventory/control connector to reduce unknown KRIs.
3. Review the PAN-OS PHP mapping and the 15-asset Brotli scope.
4. Select a pilot asset and approve ticket → containment → patch → verification with a named approver.

Evidence
